

The **112 Suomi** mobile application finds you in an emergency and speeds up the delivery of aid.

Four steps to using the **112 Suomi** application

- 1 Download the application**
Search for “112 Suomi” in your app store and download it to your smart phone as instructed.
- 2 Enter your phone number**
You need to enter your phone number the first time you open the application. When you make an emergency call through the application, the emergency service dispatcher uses your phone number to link your call to the coordinates of your location.
- 3 In an emergency**
To make an emergency call through the application, press the “Call 112” button. Calls from iPhones are connected immediately. If you have a Windows or an Android phone, you need to also press the regular call button on your phone.
- 4 You will be located automatically**
When you make an emergency call through the 112 Suomi application, the coordinates of your location are sent automatically to the emergency service dispatcher.

How does the 112 Suomi application make it faster to get help in an emergency?

It can be difficult to describe your location accurately if you are in an unfamiliar place, stranded along a long country road, or far away from main roads.

-  Emergency calls can be handled more quickly when the emergency centre dispatcher knows the coordinates of your location.
-  Knowing your exact location from the beginning of the call allows the dispatcher to send the nearest unit to help you.
-  The information also saves rescue units from having to waste time looking for you and allows them to take the most direct route to your location.

112 Suomi is a mobile application for emergency positioning developed by Digia. The Emergency Response Centre Administration recommends downloading the application.

Save the application icon in a visible place on your phone's start screen!

To benefit from the 112 Suomi application, remember to make your emergency call through the application!

For information security reasons, the application will not send the coordinates of your location unless you open the application yourself.
